DEEPAK RAKSHIT

AI ENGINEER INTERN | AGENTIC AI SYSTEMS | GENERATIVE AI & LLM ENGINEERING

deepakrakshit505@gmail.com | India | deepakrakshit.me | linkedin.com/in/deepakrakshit | github.com/deepakrakshit

TECHNICAL SKILLS

Languages		Python, TypeScript, JavaScript, C++, C, SQL, Bash
AI & Agentic Systems		LangGraph, Multi-Agent Systems, Tool Calling, Action Broker, Human-in-the-Loop Gates
LLMs & RAG		Gemini 3.8 Flash, Gemini 3.8 Live API, Qwen2.5, DeepSeek-R1, Llama 3.3, ChromaDB, FAISS, RAG Grounding
Backend & Inference		FastAPI, Ollama, vLLM/Llama.cpp, WebSockets, REST APIs, JSON-RPC 2.0, Asynchronous Workers
Systems & Security		Subprocess Sandboxing, Network Egress Controls (iptables), Microsoft UI Automation (COM), Playwright, Docker

SELECTED PROJECTS

JARVIS — Stateful Multimodal AI Operating System for Windows Sep 2026 – Present

Python, Gemini Live API, Node.js, TypeScript, Windows COM/UI Automation, WebRTC github.com/deepakrakshit/jarvis-ai

- Built a voice-and-vision AI system that controls desktop applications through a policy-enforced Action Broker, capability firewall, and post-action state verification rather than trusting model-generated actions.
- Integrated Windows UI Automation, Playwright, and a separate Node.js JSON-RPC execution engine; developed real-time WhatsApp voice calling and Telegram remote control with approval-gated sensitive actions.

Swara AI — Sovereign On-Premise Agentic AI Workbench Aug 2026 – Sep 2026

Python, LangGraph, Qwen2.5, FastAPI, ChromaDB, Docker, Pytest github.com/deepakrakshit/swara-ai

- Engineered an air-gapped, zero-cloud-egress agentic workbench for industrial refinery operations using local open-weight LLMs (Qwen2.5-VL/Coder), LangGraph orchestration, and sandboxed Python code execution.
- Implemented citation-grounded RAG over engineering SOPs and P&ID diagrams, SHA-256 loop prevention, and pre-finalization human-in-the-loop gates generating dual .docx and .xlsx deliverables.

SkillLens — Evidence-Based Candidate Verification & Skill Intelligence May 2026

React, TypeScript, FastAPI, Groq/Llama 3.3, GitHub REST API, FAISS/RAG github.com/deepakrakshit/skill-lens

- Developed a candidate-analysis platform that compares PDF resume claims against GitHub repository evidence and coding signals, identifying verified skills, unsupported claims, and role-specific skill gaps.
- Built evidence-scoring dashboards, personalized learning roadmaps, a multi-source RAG career mentor, and recruiter workflows for bulk resume evaluation and candidate ranking.

HACKATHONS & ACHIEVEMENTS

Mind to Machine Hackathon (NIET) — 1st Prize Winner Mar 2026
Won first prize at NIET's Mind to Machine hackathon after competing across three rounds.

Code2Career Hackathon by azisly.ai (NIET) — Finalist & Top Performer Oct 2026
Built an AI mock interview and GD platform with multi-persona participants using Gemini 3.8 Live API.

Segue 3.0 Design Thinking Hackathon — Finalist & Top Performer Sep 2026
Developed a stubble-burning detection system (INSAT-3DS & Sentinel-2) with a Gemini Live WhatsApp voice AI for farmers.

InnovateX NIET 1.0 — Finalist May 2026
Created SkillLens: automated candidate verification, recruiter candidate ranking, and RAG-based career guidance.

Smart India Hackathon 2026 (SIH26117) — Qualified through internal round | Team Unit8 2026
Engineered Swara AI: an on-premise sovereign agentic workbench with air-gapped RAG and human-in-the-loop controls.

EDUCATION

B.Tech in Computer Science & Engineering (AI Twin) 2025 – 2029

Noida Institute of Engineering and Technology (NIET), Greater Noida, India

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, OOP, Artificial Intelligence Foundations.
